No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

NEDO human cDNA sequencing project supported by Ministry of
International Trade and Industry of Japan; cDNA full insert
sequencing: Research Association for Biotechnology; cDNA library
construction, 5' & 3'-end one pass sequencing and clone selection:
Helix Research Institute (supported by Japan Key Technology Center
etc.) and Department of Virology, Institute of Medical Science,
University of Tokyo.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       FLSNLVEGTYTFHLKYTDAKGESDTDRTTVEVKPDPRKNNLVBIILDINVSQITERLE

Identifying a mitochondrial target for drug screening assays and for treating diseases associated with altered mitochondrial function, comprises detecting a modified polypeptide in a sample and correlating with the disease.

Claim 1; SEQ ID NO 1622; 180pp; English.

This invention relates to novel mitochondrial targets that can be used for therapeutic intervention in treating a disease associated with altered mitochondrial function. Specifically, it refers to a method for

```
identifying proteins of the human heart mitochondrial protecome that are useful for drug screening assays, as well as therapeutic targets. The present invention describes a method for identifying such proteins that can be used in the treatment of various diseases associated with altered mitochondrial function including diabetes mellitus, Huntington's disease, osteoarthritis, Leber's hereditary optic neuropathy (LHON), mitochondrial encephalopathy lactic acidosis and stroke (MELAS), myoclonic epilepsy ragged red fibre syndrome (MERRF) or cancer. Accordingly, these compositions have neuroprotective, nootropic, antidiabetic, antischondrial anticonvulsant, antiarthritic, osteopathic, ophthalmological and cytostatic activities. This polypeptide sequence is a human heart mitochondrial protein of the invention.

New 254P1D6B siRNA composition comprising a double stranded siRNA that corresponds to the nucleic acid ORF sequence which encodes the 254P1D6B protein or corresponds to a subsequence of the ORF, useful for detecting protein or correspor and treating cancer.

SEQ ID NO 11; 345pp; English. Example 1; The present invention describes a 254Plb6B small interfering RNA (siRNA) composition that comprises a double stranded siRNA that corresponds to the nucleic acid open reading frame (ORF) sequence which encodes the 254Plb6B protein, or corresponds to a subsequence of the ORF, where the coule stranded siRNA is 19, 20, 21, 22, 23, 24, or 25 contiguous consists essentially of, or consists of a peptide of eight, nine, ten, or consists essentially of, or consists of a peptide of eight, nine, ten, or cleven contiguous amino acids of a protein of figure 2 (Pl, see SEQ ID No.3, 5 or 7 ADR00592, ADR00594 or ADR00596), or a peptide included in the specification, or a protein craw of the 42 lists of peptides, given in the specification, or a protein craw of the 42 lists of peptides, given in the specification, or a protein craw of the 42 lists of peptides, given in the specification, or a protein craw of the protein call acquence of P1; (2) a polynucleotide craw that is a full complement of the polynucleotide described above, (4) generating a mammalian immune response directed to the protein or a generating, in a sample, the presence of a 254PlD6B-related protein or

254P1D6B; small interfering RNA; siRNA; immune response; 254P1D6B-related protein; cytostatic; gene therapy; cancer; human; 254P1D6B v.5; chromosome 6. 3 g Challita-Eid PM, Human 254P1D6B v.5 peptide SEQ ID NO:268 Jakobovits A, ADR00857 standard; peptide; 29 AA. 23-JAN-2004; 2004WO-US001965. 24-JAN-2003; 2003US-0442526P Perez-Villar JJ, Faris M; (first entry) Raitano AB,

New 254P1D6B siRNA composition comprising a double stranded siRNA that corresponds to the nucleic acid ORF sequence which encodes the 254P1D6B protein or corresponds to a subsequence of the ORF, useful for detecting and treating cancer.

Example 13; SEQ ID NO 268; 345pp; English.

The present invention describes a 254PID6B small interfering RNA (siRNA) composition that comprises a double stranded siRNA that corresponds to 254PID6B protein, open reading frame (ORF) sequence which encodes the double stranded siRNA is 19, 20, 21, 22, 23, 24, or 25 contiguous nucleotides in length. Also described: (1) a composition that comprises, or sessentially of, or consists of a peptide of eight, nine, ten, or eleven contiguous amino acids of a protein of figure 2 (Pl, see SEQ ID NO:3, 5 or 7 ADRO0592, ADRO0594 or ADRO0596), or a peptide included in any of the 42 lists of peptides, given in the specification, or a protein

```
generating a mammalian immune response directed to the protein of P1; (5) detecting, in a sample, the presence of a 254PlD6B-related protein or a 254PlD6B-related protein or a catus of a cell that expresses a protein of P1; (7) a pharmaceutical catus of a cell that expresses a protein of P1; (7) a pharmaceutical composition that comprises the composition described above in a human control of an antibody or its fragment, which is smootlonal; (9) a non-human transgenic animal that produces the antibody; (10) a hybridoma that produces the antibody; (11) delivering a cytotoxic agent or a diagnostic agent to a cell that expresses the protein of P1; and can be express the protein of P1; and can be used in gene thoraty. The compositions, molecules and methods are useful to treating and detecting cancer. The present sequence represents a human 254PlD6B v. 5 peptide, which is used in the exemplification of the present invention. The human 254PlD6B gene is located on chromosome 6p22.
   92, 93, 94, 95, 96, 97, 98, or 99% homologous or
                         identical to an entire amino acid sequence of P1; (2) a polynucleotide that encodes the protein; (3) a composition comprising a polynucleotide that is a full complement of the polynucleotide described above; (4)
   is at least 90, 91,

New 254P1D6B siRNA composition comprising a double stranded siRNA that corresponds to the nucleic acid ORF sequence which encodes the 254P1D6B protein or corresponds to a subsequence of the ORF, useful for detecting and treating cancer.

Example 13; SEQ ID NO 262; 345pp; English.

The present invention describes a 254PID6B small interfering RNA (siRNA) composition that comprises a double stranded siRNA that corresponds to the nucleic acid open reading frame (ORF) sequence which encodes the 254PID6B protein, or corresponds to a subsequence of the ORF, where the

```
consists essentially of, or consists of a peptide of eight, nine, ten, or consists essentially of, or consists of a peptide of eight, nine, ten, or eleven contiguous amino acids of a protein of figure 2 (91, see SEQ ID CC eleven contiguous amino acids of a protein of figure 2 (91, see SEQ ID NO:3, 5 or 7 ADR00592, ADR00594 or ADR00596), or a peptide included in the start is at least 90, 91, 92, 93, 94, 95, 96, 97, 98, or 99% homologous or that is at least 90, 91, 92, 93, 94, 95, 96, 97, 98, or 99% homologous or identical to an entire amino acid sequence of P1; (2) a polynucleotide that is a full complement of the polynucleotide described above; (4) composition a mammalian immune response directed to the protein or a 254P1D6B-related polynucleotide; (6) a composition that modulates the catture of a cell that expresses a protein of P1; (7) a pharmaceutical composition that comprises the composition described above in a human cut that comprises the composition described above in a human confidence of a cell that expresses the protein of P1; (7) a pharmaceutical confidence and antibody or its fragment, which is monoclonal; (9) a non-human transgenic animal that produces the antibody; (11) delivering a cytotoxic agent or a diagnostic agent to a cell that expresses the protein of P1; and (12) inhibiting growth, reproduction or survival of cancer cells that expresses the protein of P1; and (12) inhibiting growth, reproduction or survival of cancer cells that expresses the protein of P1; and cell in gene therapy. The compositions, molecules and methods are useful for treating and detecting cancer. The present sequence represents a human 254P1D6B year is located on chromosome 6p22.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New 254PID6B siRNA composition comprising a double stranded siRNA that corresponds to the nucleic acid ORF sequence which encodes the 254PiD6B protein or corresponds to a subsequence of the ORF, useful for detecting and treating cancer.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                      The present invention describes a 254P1D6B small interfering RNA (siRNA) composition that comprises a double stranded siRNA that corresponds to the uncleic acid open reading frame (ORF) sequence which encodes the 254P1D6B protein, or corresponds to a subsequence of the ORF, where the double stranded siRNA is 19, 20, 21, 23, 24, or 25 contiguous nucleotides in length, Also described: (1) a composition that comprises onsists essentially of, or consists of a peptide of eight, nine, ten, or eleven contiguous amino acids of a protein of figure 2 [Pl, see SRQ ID NO:3, so or 7 ADRO0592, ADRO0595), or a peptide included in any of the 42 lists of peptides, given in the specification, or a protein that is at least 90, 91, 92, 93, 94, 95, 96, 97, 98, or 99% homologous or identical to an entire amino acid sequence of P1; (2) a polynucleotide that encodes the protein; (3) a composition comprising a polynucleotide that is a full complement of the polynucleotide described above; (4)
                                                                                                                                                                                                                                                                                                                                 hybridoma that produces the antibody; (11) delivering a cytotoxic agent or a diagnostic agent to a cell that expresses the protein of P1; and (12) inhibiting growth, reproduction or survival of cancer cells that express the protein of P1. 254Plo6B has cytostatic activity, and can be used in gene therapy. The compositions, molecules and methods are useful for treating and detecting cancer. The present sequence represents a human 254Plo6B v.2 peptide, which is used in the exemplification of the present invention. The human 254Plo6B gene is located on chromosome 6p22.
                                                                                                                                                                                                                            generating a mammalian immune response directed to the protein of P1; (5) detecting, in a sample, the presence of a 254PlD6B-related protein or a 254PlD6B-related protein or a status of a cell that expresses a protein of P1; (7) a pharmaceutical composition that comprises the composition described above in a human unit dose form; (8) an antibody or its fragment, which is monoclonal; (9) a non-human transgenic animal that produces the antibody; (10) a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

The present invention describes a 254P1D6B small interfering RNA (siRNA)

composition that comprises a double stranded siRNA that corresponds to

the nucleic acid open reading frame (ORF) sequence which encodes the

composition that corresponds to a subsequence of the ORF, where the

double stranded siRNA is 19, 20, 21, 22, 23, 24, or 25 contiguous

nucleotides in length. Also described: (1) a composition that comprises,

consists essentially of, or consists of a peptide of eight, nine, ten, or

eleven contiguous amino acids of a protein of figure 2 (P1, see SEQ ID

NO:3, 5 or 7 ABN00592, ABN00594 or ABN00596, or a peptide included in

any of the 42 lists of peptides, given in the specification, or a protein

that is at least 90, 91, 92, 93, 94, 95, 96, 97, 98, or 99% homologous or

chat is at least 90, 91, 92, 93, 94, 95, 96, 97, 98, or 99% homologous or

chat is a full complement of the polymucleotide described above; (4)

chat is a full complement of the polymucleotide described above; (4)

detecting, in a sample, the presence of a 254P1D6B-related protein or a

capania a mammalian immune response directed to the protein of a

capania of a cell that expresses a protein of P1; (7) a pharmaceutical

composition that comprises the composition described above in a human

cuit dose form; (8) an antibody or its fragment, which is monoclonal; (9)

unther domesting a marmal that produces the antibody; (10) a

charactering a marmal that produces the antibody; (10) a

charactering a marmal that produces the antibody; (10) a

charactering a marmal that produces the antibody; (10) a

charactering a marmal that produces the antibody; (10) a

charactering a marmal that produces the antibody; (10) a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         hybridoma that produces the antibody; (11) delivering a cytotoxic agent or a diagnostic agent to a cell that expresses the protein of P1; and (12) inhibiting growth, reproduction or survival of cancer cells that express the protein of P1. 254PlD6B has cytostatic activity, and can be used in gene therapy. The compositions, molecules and methods are useful for treating and detecting cancer. The present sequence represents a human 254PlD6B v. 5 peptide, which is used in the exemplification of the present invention. The human 254PlD6B gene is located on chromosome 6p22.
254PlD6B siRNA composition comprising a double stranded siRNA that responds to the nucleic acid ORF sequence which encodes the 254PlD6B cain or corresponds to a subsequence of the ORF, useful for detecting
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  254P1D6B; small interfering RNA; siRNA; immune response;

The present invention describes a 254PlD6B small interfering RNA (siRNA) composition that comprises a double stranded siRNA that corresponds to the nucleic acid open reading frame (ORF) sequence which encodes the corresponds to a subsequence of the ORF, where the 254PlD6B protein, or corresponds to a subsequence of the ORF, where the coulectides in length. Also described: (1) a composition that comprises, consists essentially of, or consists of a peptide of eight, nine, ten, or consists sesentially of, or consists of a peptide of eight, nine, ten, or carry of the 42 lists of peptides, of a peptide included in any of the 42 lists of peptides, given in the specification, or a protein control to an entire amino acid sequence of P1; (2) a polymucleotide that encodes the protein; (3) a composition comprising a polymucleotide that is a full complement of the polymucleotide described above; (4) generating a mammalian immune response directed to the protein or a 254PlD6B-related polymucleotide; (6) a composition that modulates the composition that modulates the composition that comprises the composition described above in a human composition that comprises the composition described above in a human composition animal that produces the monoclonal; (9) a polymucleotide animal dose form; (8) an antibody or its fragment, which is monoclonal; (9) which are produced that produces the animal animal animal that produces the monoclonal; (1) which are produced animal that produces the monoclonal; (1) which are produced and animal animal animal that produces the monoclonal; (1) which are produced and animal animal animal that produces the monoclonal; (1) which are produced and animal animal animal that produces the monoclonal; (1) which are produced and animal animal animal that produced the produced animal animal animal that produced the produced animal animal animal animal that produced the produced animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal anim
    The present invention describes a 254P1D6B small interfering RNA (siRNA) composition that comprises a double stranded siRNA that corresponds to the nucleic acid open reading frame (ORF) sequence which encodes the 254P1D6B protein, or corresponds to a subsequence of the occess the consists acid open reading frame (ORF) sequence of the codes the consists as sentially of, or consists (1) a composition that comprises, consists essentially of, or consists (1) a composition that comprises, consists essentially of, or consists of a peptide of eight, nine, ten, or eleven contiguous amino acids of a protein of figure 2 (Pl, see SEQ ID NO.3, 5 or 7 ADR00592, ADR00594 or ADR00596), or a peptide included in that is at least 90, 91, 92, 93, 94, 95, 96, 97, 98, or 98 homologous or that is a tleast 90, 91, 92, 93, 94, 95, 96, 97, 98, or 98 homologous or identical to an entire amino acid sequence of P1; (2) a polynucleotide that is a full complement of the polynucleotide described above; (4) capacating a mammalian immune response directed to the protein or a 254P1D6B-related polynucleotide; (6) a composition that modulates the composition that comprises the composition that modulates the capacities of a call that expresses a protein of P1; (7) a pharmaceutical composition that comprises the composition described above in a human control or a confidence form; (8) an antibody or its fragment, which is monoclonal; (9) a non-human transgenic animal that produces the antibody; (11) delivering a cytotoxic agent confidence form; (8) an antibody or its fragment, which is monoclonal; (12) inhibiting growth, reproduction or survival of cancer cells that express the protein of P1; (12) inhibiting growth, reproduction or survival of cancer cells that express the protein of P1. Cancer cells that express the protein of P1. Cancer cells that express the protein of P1. Cancer cells that express the protein of P1. Cancer cells that the composition or survival of cancer cells that cancer cells that the cancer cells that the cancer cells that th
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             for treating and detecting cancer. The present sequence represents the human 254P1D6B peptide, which is used in the exemplification of the present invention. The human 254P1D6B gene is located on chromosome 6p22.
                                                                                                                                                                                                                                                                         New 254PlD6B siRNA composition comprising a double stranded siRNA that corresponds to the nucleic acid ORF sequence which encodes the 254PlD6B protein or corresponds to a subsequence of the ORF, useful for detecting
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

hybridoma that produces the antibody; (11) delivering a cycotoxic agent or a diagnostic agent to a cell that expresses the protein of P1; and (12) inhibiting growth, reproduction or survival of cancer cells that express the protein of P1. 254PlD6B has cytostatic activity, and can be used in gene therapy. The compositions, molecules and methods are useful for treating and detecting cancer. The present sequence represents a human 254PlD6B v. 5 peptide, which is used in the exemplification of the present invention. The human 254PlD6B gene is located on chromosome 6p22.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          254PlD6B; small interfering RNA; siRNA; immune response;

```
The present invention describes a 254PlD6B small interfering RNA (siRNA) composition that comprises a double stranded siRNA that corresponds to the nucleic acid open reading frame (ORF) sequence which encodes the couposition that caid open reading frame (ORF) sequence which encodes the couble stranded siRNA is 19, 20, 21, 22, 23, 24, or 25 contiguous nucleotides in length. Also described: (1) a composition that comprises, consists essentially of, or consists of a protein of figure 2 (Pl, see SEQ ID NO:3, 5 or 7 ADR00592, ADR00594 or ADR00596), or a peptide included in any of the 42 lists of peptides, given in the specification, or a protein that is at least 90, 91, 92, 93, 94, 95, 96, 97, 98, or 99% homologous or identical to an entire amino acid sequence of P1; (2) a polynucleotide that is a full complement of the polynucleotide described above; (4) generating a mammalian immune response directed to the protein of P1; (5) generating a mammalian immune response directed to the protein of P1; (5) generating a mammalian immune response directed to the protein of P1; (5) generating a mammalian immune response threat modulates the catus of a cell that expresses a protein of P1; (7) a pharmaceutical composition that composition described above; (4) a non-human transgence and an entitle of a composition that modulates the status of a cell that expresses a protein of P1; (7) a pharmaceutical composition that produces the antibody; (11) delivering a cyctoxic agent or a diagnostic agent to a composition or survival of cancer cells that expresses the protein of P1; (12) inhibiting growth, reproduced non environment sequence represents a cuseful for treating and detecting cancer. The present sequence represents a human 254PlD6B v. 2 peptide, which is used in the exemplification of the present invention. The human 254PlD6B gene is located on chromosome 6p22.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                           New 254PlD6B siRNA composition comprising a double stranded siRNA that corresponds to the nucleic acid ORF sequence which encodes the 254PlD6B protein or corresponds to a subsequence of the ORF, useful for detecting
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

(I) is useful as hybridisation probes, polymerase chain recaction (PRR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production soft of the polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at the typ.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

04-NOV-2004

ADR00727;

ADR00727 standard; peptide; 9 AA.

```
The present invention describes a 234Plobs small interfering WAM (SIRWA) composition that comprises a double stranded siRNA that corresponds to the nucleic acid open reading frame (ORF) sequence which encodes the CS 254Plobs protein, or corresponds to subsequence of the ORF, where the double stranded siRNA is 19, 20, 21, 22, 23, 24, or 25 contiguous double stranded siRNA is 19, 20, 21, 22, 23, 24 or 25 contiguous anino acids of a peptide of eight, nine, ten, or consists of a peptide of eight, nine, ten, or eleven contiguous amino acids of a protein of figure 2 (Pl, see SEQ ID NO.3, 5 or 7 ADR00592, ADR00594 or ADR00596), or a peptide included in that is at least 90, 91, 92, 93, 94, 95, 96, 97, 98, or 99% homologous or that is at least 90, 91, 92, 93, 94, 95, 96, 97, 98, or 99% homologous or identical to an entire amino acid sequence of P1; (2) a polynucleotide that encodes the protein; (3) a composition comprising a polynucleotide that is a full complement of the polynucleotide described above; (4) cantain a mammalian immune response directed to the protein or a 254PloBe-related polynucleotide; (6) a composition that modulates the status of a cell that expresses a protein of P1; (7) a pharmaceutical composition that comprises the composition described above in a human confinement that produces the antibody or its fragment, which is monoclonal; (9) a non-human transgent animal that expresses the protein of P1; and call that expresses the protein of P1; and contained that produces the antibody; (11) delivering a cytostic agent to a cell that expresses the protein of P1; and contained that any produced the artibody; (11) a non-human transgent to a cell that expresses the protein of P1; and contained that produces the antibody; (11) delivering a cytostic of a call that expresses the protein of P1; and contained that a contained that any produced the artibody of call that expresses the protein of P1; and contained the contained that the produced the artibody of call that expressed the protein of P1; and call that ex
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  used in gene therapy. The compositions, molecules and methods are useful for treating and detecting cancer. The present sequence represents a human 254P1D6B v:3 peptide, which is used in the exemplification of the present invention. The human 254P1D6B gene is located on chromosome 6p22.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      corresponds to the nucleic acid ORF sequence which encodes the 254PlD6B protein or corresponds to a subsequence of the ORF, useful for detecting
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      present invention describes a 254P1D6B small interfering RNA (siRNA)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           254P1D6B siRNA composition comprising a double stranded siRNA that

                                                                                                                                                                                                                                                                                                                Homo sapiens.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                12-AUG-2004
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Kanner SB.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New
```

New 254P1D6B siRNA composition comprising a double stranded siRNA that corresponds to the nucleic acid ORF sequence which encodes the 254P1D6B protein or corresponds to a subsequence of the ORF, useful for detecting

Example 9; SEQ ID NO 138; 345pp; English.

and treating cancer.

12-AUG-2004.

chromosome 6. Homo sapiens.

```
The present invertion users a sufficion shall invertering the composition that comprises a double stranded shrNA that corresponds to the nucleic acid open reading frame (ORF) sequence which encodes the cursesponds to subsequence of the ORF, where the double stranded shrNA is 19, 20, 21, 22, 23, 24, or 25 contiguous consists of a peptide of eight, nine, ten, or eleven contiguous amino acids of a period of a peptide of eight, nine, ten, or eleven contiguous amino acids of a protein of figure 2 (P., see SEQ ID NO:3, 5 or 7 ADR00592, ADR00594 or ADR00596), or a peptide included in that is at least 90, 91, 92, 93, 94, 95, 96, 97, 98, or 98 homologous or that encodes the protein; of eight encodes the protein; of the protein of the protein; of the protein; of the protein; of the composition composition composition and asample, the presence of a 254PD6B-related protein or a 254PD6B-related polymucleotide described above; (4) composition that comprises the composition described above in a human curit dose form; (8) an antibody or its fragment, which is monoclonal; (9) a non-human transgent canned browders the antibody; (10) a non-human transgent to a cell that expresses the protein of P1; (7) a pharmaceutical composition at that produces the antibody; (10) a non-human transgent to a cell that expresses the protein of P1; and composition at broadcast and antibody; (11) delivering a cytotoxic agent or a diagnostic agent to a cell that expresses the protein of encertivity, and can be expressed the protein of encertivity, and can be composition and because the protein of encertivity, and can be composition and the protein of encertivity and can be composition and produced the acid of cancer cells that encodes the protein of encertivity, and can be composition and produced the acid of cancer cells that encodes the protein of cancer cells that encodes the protein of encodes the antibody; and can be expressed to a continuous produced the acid of cancer cells that encodes the antibody; and can be produced to the protein of enco
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           used in gene therapy. The compositions, molecules and methods are useful for treating and detecting cancer. The present sequence represents the human 254P1D6B peptide, which is used in the exemplification of the present invention. The human 254P1D6B gene is located on chromosome 6p22.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              present invention describes a 254P1D6B small interfering RNA (siRNA)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 9 AA;

The invention provides a method of diagnosis of tauopathies in an individual that comprises determining the ratio of phospho-tau (181)/
c total tau. Tau and phospho tau are useful as neurological markers for the manufacture of a diagnostic kit for the diagnosis of a tauopathy and/or the differential diagnostic for a tauopathy versus a non tauopathy and/or choosing the differential diagnosts of a tauopathy versus a non tauopathy. A phospho-peptide liable to form an immunological complex with monoclonal antibody HT7 and MAB AT270 comprising at least the minimal epitope of HT7 or AT270 is useful to measure phospho-tau levels and diagnose a tauopathy and/or for the differential diagnosis of a tauopathy versus a non cauopathy. The kit is useful for the diagnosis of Alzheimer's disease, pick's disease, sporadic Frontotemporal dementia and/or Frontotemporal dementia and/or Frontotemporal dementia and/or for neurotoxicity in patients with leukemia. The disease, stroke and/or neurotoxicity in patients with leukemia. The disease, stroke and/or neurotoxicity in patients with leukemia. The for determining the effectiveness of a treatment. The present sequence represents a phospho-peptide binding to MAbs HT7 and AT270
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Determining the ratio of phospho-tau / total tau is useful for diagnosing a tauopathy i.e. Alzheimer's disease or Pick's disease, versus a non
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Tauopathy; phospho-tau (181); neurological marker; monoclonal antibody; HT7; AT270; nootropic; neuroprotective; cerobroprotective; epitope.

The present invention describes a method for the differential diagnosis of an individual suffering from Alzheimer's disease versus an individual suffering from mercological disease involves using phospho-tau (I) as a neurological marker. Also described are: (I) a diagnostic kit for use in the differential diagnosis of an individual suffering from Alzheimer's and disease versus an individual suffering from another neurological disease; and disease versus an individual suffering from another neurological disease; and disease versus an expectation of the diagnostic kit. (I) has neuroprotective and noctropic diagnosis and in the manufacture of a diagnostic kit for the differential diagnosis of an individual suffering from Alzheimer's disease versus an individual suffering from another neurological disease such as dementics with Lewy bodies, Parkinson's disease without dementia, multi-system arrophy and/or progressive supranuclear palsy, and for screening or arrophy and/or progressive supranuclear palsy, and for screening or treat Alzheimer's disease and the other neurological diseases. The method is effective in the differential diagnosis of Alzheimer's disease versus corebrospinal fluid (CSP)-beta-amyloid synthetic peptide which is used in the exemplification of the present invention
                                                                                                                                                                                                                                         Cerebrospinal fluid; CSF; beta amyloid; differential diagnosis; neurological disease; Alzheimer's disease; neuroprotective; nootropic; dementic; Parkinson's disease; dementia; multi-system atrophy;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Method for the differential diagnosis of an individual suffering from Alzheimer's disease versus an individual suffering from another neurological disease involves use of phospho-tau as a neurological
                                                                                                                                                                                                        Cerebrospinal fluid (CSF)-beta-amyloid synthetic peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         'note= "phosphorylated threonine"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention describes a 254P1D6B small interfering RNA (siRNA) composition that comprises a double stranded siRNA that corresponds to the nucleic acid open reading frame (ORF) sequence which encodes the 254P1D6B protein, or corresponds to a subsequence of the ORF, where the double stranded siRNA is 19, 20, 21, 22, 23, 24 or 25 contiguous nucleotides in length. Also described: (1) a composition that comprises, consists sesentially of, or consists of a peptide of eight, mine, ten, or eleven contiguous amino acids of a protein of figure 2 (P1, see SEQ ID NO:3, sor 7 ADROS92, ADROS959), or a peptide included in any of the 42 lists of peptides, given in the specification, or a protein that is at least 90, 91, 92, 93, 94, 95, 96, 97, 98, or 99% homologous or identical to an entire amino acid sequence of P1; (2) a polymucleotide that is a full complement of the polymucleotide described above; (4)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                generating a mammalian immune response directed to the protein of Pi; (5) detecting, in a sample, the presence of a 254PlD6B-related protein or a 254PlD6B-related protein or a 254PlD6B-related polynuclectide; (6) a composition that modulates the status of a cell that expresses a protein of Pi; (7) a pharmaceutical composition that comprises the composition described above in a human unit dose form; (8) an antibody or its fragment, which is monoclonal; (9)

Also described: (1) a composition that comprises, consists essentially of, or consists of a peptide of eight, mine, ten, or eleven contiguous amino acids of a protein of figure 2 (Pl, see SEQ ID NO:3, 5 or 7ADRO0592, ADRO0595), or a peptide included in that is at least 90, 91, 92, 93, 94, 95, 96, 97, 98, or 99% homologous or that is at least 90, 91, 92, 93, 94, 95, 96, 97, 98, or 99% homologous or that encodes the protein; (3) a composition comprising a polynucleotide that is a full complement of the polynucleotide described above; (4)
             hybridoma that produces the antibody; (11) delivering a cytotoxic agent to a delighestic agent to a cell that expresses the protein of Pi; and (12) inhibiting growth, reproduction or survival of cancer cells that express the protein of Pi. 254PlD6B has cytostatic activity, and can be used in gene therapy. The compositions, molecules and methods are useful for treating and detecting cancer. The present sequence represents the human 254PlD6B peptide, which is used in the exemplification of the present invention. The human 254PlD6B gene is located on chromosome 6p22.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New 254PlD6B siRNA composition comprising a double stranded siRNA that corresponds to the nucleic acid ORF sequence which encodes the 254PlD6B protein or corresponds to a subsequence of the ORF, useful for detecting

hybridoma that produces the antibody; (11) delivering a cyctoxic agent or a diagnostic agent to a cell that expresses the protein of P1; and (12) inhibiting growth, reproduction or survival of cancer cells that express the protein of P1. 254PlD6B has cycostatic activity, and can be used in gene therapy. The compositions, molecules and methods are useful for treating and detecting cancer. The present sequence represents the human 254PlD6B peptide, which is used in the exemplification of the present invention. The human 254PlD6B gene is located on chromosome 6p22.
                        detecting, in assimple, the presence of a 254PlD6B-related protein or a 254PlD6B-related polynucleotide; (6) a composition that modulates the status of a cell that expresses a protein of P1; (7) a pharmaceutical composition that comprises the composition described above in a human unit dose form; (8) an antibody or its fragment, which is monoclonal; (9) a non-human transgenic animal that produces the antibody; (10) a
generating a mammalian immune response directed to the protein of Pl; (5)

New 254P1D6B siRNA composition comprising a double stranded siRNA that corresponds to the nucleic acid ORF sequence which encodes the 254P1D6B protein or corresponds to a subsequence of the ORF, useful for detecting and treating cancer.

Example 9; SEQ ID NO 249; 345pp; English.

ö The present invention describes a 254PlD6B small interfering RNA (siRNA) composition that comprises a double stranded siRNA that corresponds to the nucleic acid open reading frame (ORF) sequence which encodes the 254PlD6B protein, or corresponds to a subsequence of the ORF, where the double stranded siRNA is 19, 20, 21, 22, 23, 24, or 25 contiguous coursected sin length. Also described: (1) a composition that comprises, consists essentially of, or consists of a peptide of eight, nine, ten, or eleven contiguous amino acids of a protein of figure 2 (PI, see SEQ ID

any of the 42 lists of peptides, given in the specification, or a protein any of the 42 lists of peptides, given in the specification, or a protein that is at least 80, 91, 92, 94, 95, 96, 97, 98, or 99% homologous or identical to an entire amino acid sequence of P1; (2) a polynucleotide that the at lull complement of the polynucleotide described above; (4) a generating a mammalian immune response directed to the protein of P1; (5) generating a mammalian immune response directed to the protein of P1; (5) detecting, in a sample, the presence of a 254P1D6B-related polynucleotide; (6) a composition that modulates the status of a cell that expresses a protein of P1; (7) a pharmaceutical composition that comprises the composition described above in a human composition that comprises the composition described above in a human annohuman transgenic animal that produces the antibody; (10) a phoridoma that produces the antibody; (11) delivering a cytotoxic agent or a diagnostic agent to a cell that expresses the protein of P1; and composition or survival of cancer cells that express the protein of P1. 254P1D6B has cytostatic activity, and can be used in gene therapy. The compositions, molecules and methods are useful for treating and detecting cancer. The present sequence represents the human 254P1D6B gene is located on chromosome 6p22. \$

New 254P1D6B siRNA composition comprising a double stranded siRNA that corresponds to the nucleic acid ORF sequence which encodes the 254P1D6B protein or corresponds to a subsequence of the ORF, useful for detecting and treating cancer.

Example 1; SEQ ID NO 12; 345pp; English.

The present invention describes a 254P1D6B small interfering RNA (siRNA) composition that comprises a double stranded siRNA that corresponds to the nucleic acid open reading frame (ORF) sequence which encodes the case 254P1D6B protein, or corresponds to a subsequence of the ORF, where the double stranded siRNA is 19, 20, 21, 22, 23, 24, or 25 contiguous conclectides in length. Also described: (1) a composition that comprises, consists essentially of, or consists of a peptide of eight, nine, ten, or eleven contiguous amino acids of a protein of figure 2 (P1, see SEQ ID NO:3, 5 or 7 ABN00592, ABR00594 or ABR00596), or a peptide included in any of the 42 lists of peptides, given in the specification, or a protein chat is at least 90, 91, 92, 93, 94, 95, 96, 97, 98, or 99% homologous or identical to an entire amino acid sequence of P1; (2) a polynucleotide that encodes the protein; (3) a composition comprising a polynucleotide that is a full complement of the polynucleotide described above; (4) generating a mammalian immune response directed to the protein of P1; (5)

```
detecting, in a sample, the presence of a 254P1D6B-related protein or a 254P1D6B-related polynucleotide; (6) a composition that modulates the catatus of a cell that expresses a protein of P1; (7) a pharmaceutical composition that comprises the composition described above in a human unit dose form; (8) an antibody or its fragment, which is monoclonal; (9) a non-human transgenic animal that produces the antibody; (10) a hybridoma that produces the antibody; (11) delivering a cytotoxic agent or a diagnostic agent to a cell that expresses the protein of P1; and (12) inhibiting growth, reproduction or survival of cancer cells that express the protein of P1. 254P1D6B has cytostatic activity, and can be used in gene therapy. The compositions, molecules and methods are useful for treating and detecting cancer. The present sequence represents the human 254P1D6B v.6, which is used in the exemplification of the present invention. The human 254P1D6B gene is located on chromosome 6p22.

generating a mammalian immune response directed to the protein of P1; (5) detecting, in a sample, the presence of a 254PloBe-related protein or a 254PloBe-related polyucleotide; (6) a composition that modulates the status of a cell that expresses a protein of P1; (7) a pharmaceutical composition that comprises the composition described above in a human unit dose form; (8) an antibody or its fragment, which is monoclonal; (9) a non-human transgenic animal that produces the antibody; (10) a hybridoma that produces the antibody; (11) delivering a cyctoxic agent or a diagnostic agent to a cell that expresses the protein of P1; and (12) inhibiting growth, reproduction or survival of cancer cells that express the protein of P1. 254PlD6B has cytostatic activity, and can be used in gene therapy. The compositions, molecules and methods are useful for treating and detecting cancer. The present sequence represents the human 254PlD6B v.1 clone LCP-3, which is used in the exemplification of the present invention. The human 254PlD6B gene is located on chromosome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  240
